

What is elacoin?

What is elacoin

Moore's Law and Difficulty based Block Reward

The **more** computational **power** you throw at it, the **higher** the **reward**. The reward is halved every nine months to preserve the coin's value.

Stable and self regulating

Less demand? Less hashpower, **less** block **reward**, less supply. Same value. **High** demand? More hashpower, **more** block **reward**, more supply. Same value.

Fast Payments and Confirmation

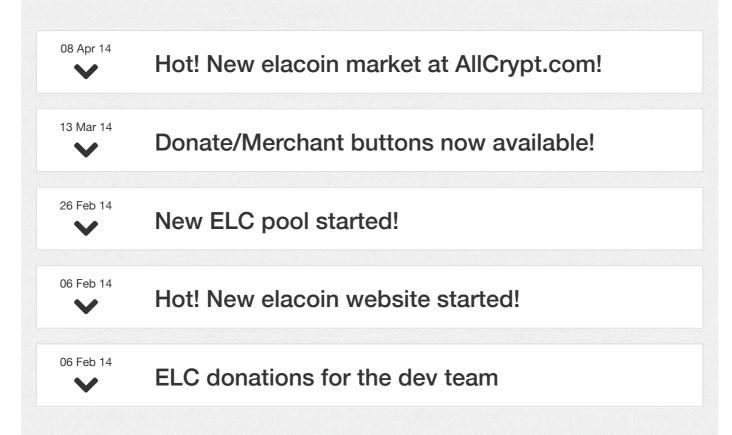

The block target is one every **2 minutes**, which is the perfect amount. Fast enough without running into network IO limits, or bloating your hard drive.

Open to everyone. No premining.

Elacoin is open to everyone, there is no small group of miners or investors who were rewarded premined coins.
